

The first security product designed exclusively for the Small and Home Office

The small office environment has unique security requirements. It demands the same powerful, comprehensive PC and server security as larger enterprises, but without the need for expert IT knowledge. Kaspersky Lab has developed a world-class protection solution that is quick to install and configure, easy-to-manage and won't slow your computers down. So you stay focused on your business, while Kaspersky Small Office Security protects your network, data and business reputation.

# Kaspersky Small Office Security

## World-Class Protection for Small Offices

- ▶ Real-Time Internet Threat Protection
- ▶ Web-Use Policy Management
- ▶ All-In-One Security Tools
- ▶ Simple, Intuitive Interface

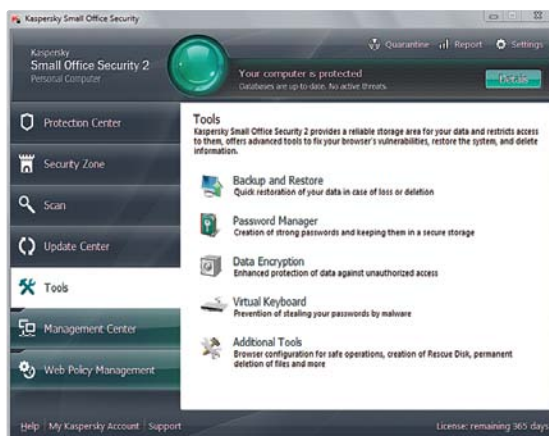

## WHAT'S NEW in this version?

Kaspersky Small Office Security heralds an entirely new generation of small and home office IT security solutions – designed exclusively to provide your company with optimal security at an affordable price, and without the need for specialist IT skills.

- It includes an easy-to-use Management Console that lets you control and view the protection status of your server and networked computers from one point.
- Kaspersky Small Office Security has advanced data protection capabilities such as backup and encryption to prevent theft, loss and corruption of your confidential client records and business data.
- Password Manager generates strong passwords, stores employee login credentials in individual, encrypted databases and auto-completes website logins and forms.
- With Web-Use Policy tools you can conveniently manage your employee web-use policy, limiting access to the Internet, applications, games, websites, social networking and file downloads.

\* Password Manager is suitable for use with 32-bit applications and browsers only

Intuitive, simple interface for easy management of PC and server security

## WHY PROTECT YOUR BUSINESS with Kaspersky Small Office Security?

### ► It's specifically designed for Small and Home Offices

Kaspersky Small Office Security is the first solution specifically designed to protect small and home office systems. It combines the sophisticated network protection features normally demanded by enterprise-level clients, with a highly intuitive Management Console that makes administration simple, web policy control straightforward and provides secure data backup for the PCs and server in your office – all from a single computer.

### ► It protects employees' workstations and your server

With Kaspersky Small Office Security, it's easy and convenient to protect your business' PCs, server and data. With its unique Management Console, you can easily oversee the protection of your entire network from one PC: run scans, updates and backup tasks; fix security issues; remotely enforce your employee web-use policy and update security licenses. Maintaining your office's network security has never been more quick and convenient.

### ► It does not require advanced IT skills to install, use and manage

We realize the importance of network security and know that very few small businesses have a dedicated IT specialist on hand or easy access to an outsourced IT service provider. So we have made our solution simple to use, regardless of your level of IT skill. The default settings are optimized for small business needs and changing security settings couldn't be simpler!
